

Where Sophisticated Technology Feels Simple

INALP

Which challenges does Inalp address — and how do we solve them

 DEVELOPED IN SWITZERLAND

Geopolitical Dependence

Europe is redefining its technological autonomy. Who can you trust to remain a reliable partner in this new landscape?

INALP is an **independent Swiss company**, owned by Swiss entrepreneurs and dedicated to serving European industries with neutrality, continuity, and trust.

Loss of Data Sovereignty

Who should have access to your data — you or your cloud provider?

With the **U.S. CLOUD Act**, authorities can demand access to data stored by American cloud providers, even within the EU.

INALP software can run on **your infrastructure** — in a data center or on-premises — giving you full ownership and control of your data.

Limited Availability and Resilience

When even major cloud providers go offline — what happens to your operations?

Recent large-scale outages have shown how quickly a single failure can ripple across entire industries.

INALP solutions can be deployed as **geo-redundant, distributed systems** across multiple sites, ensuring your applications keep running even when external services fail.

Restricted Reachability

Complex IT/OT networks, remote sites, strict firewalls, and divided responsibilities often make systems hard to reach and manage. How do you stay connected to your systems and sites?

INALP provides **secure, reliable connectivity** that works across locations and organizations — without reconfiguring networks or adding complexity.

Technical Complexity

Modern industrial systems are powerful but increasingly difficult to configure, secure, and maintain. How do you stay in control as technology grows more complex?

INALP develops **intuitive, secure solutions** that make complex networking and IoT systems easy to manage and operate. As da Vinci said, “*Simplicity is the ultimate sophistication.*” We give our best — and more — to live by this principle every day.

Closed Ecosystems

Many industrial systems are locked into vertical, single-vendor platforms, limiting flexibility and collaboration. How can you stay open to innovation without losing control?

INALP builds **open, interoperable technologies** that integrate with existing devices, platforms, and clouds — giving you the freedom to choose, connect, and evolve on your own terms.

Rising Cost

Operating expenses for digital infrastructure keep climbing — especially with cloud-based services and recurring fees. How can you keep costs predictable and transparent?

INALP offers a **fair, ownership-based licensing model** with clear pricing and no hidden costs — ensuring long-term value and financial control.

Our Customers

OEM Partners - embed Inalp's proven connectivity and data technology to improve their own products.

System Integrators - deliver complete IoT solutions faster using Inalp's modular stack.

Utilities and Energy Providers improve efficiency through real-time monitoring and data-driven insight.

Our Products

Our DNA

Our partnership with **Kimmy Repond**, a professional figure skater, reflects what drives us at Inalp: what looks effortless is the result of mastery, discipline, and relentless practice.

Peak performance is at our heart — we bring the same dedication to developing technologies that turn complexity into simplicity, helping our customers overcome challenges with clarity and confidence.

Our Company

Inalp Group AG

Inalp Solutions AG

Inalp RS DOO

Inalp Distribution AG

Inalp Europe AG

Inalp Group AG

Holding company for the group's participations, patents, brands, and licenses.

Inalp Solutions AG

Develops and markets software and hardware for secure networking and IoT.

Inalp RS DOO

Nearshore software development and services; mobile and UI competence.

Inalp Distribution AG

Distribution channel for goods and equipment sales.

Inalp Europe AG

Sales and distribution hub within the EU.
